

PLACE VALUE POSTERS

Enrich your classroom environment with this colourful and informative set of place value posters which can be use to create a large place value chart and expanded when new number concepts are introduced.

A place value chart is a visual representation of our number system and helps with the location and comparison of the digits within numbers. It helps with the understanding of place value in that the value of a digit increase ten times as we move left on the chart and decreases by ten as we move to the right.

They can also be very helpful when introducing decimals and the correct positioning and naming of these numbers.

Copy, trim and then laminate each poster. Choose and then create your own place value chart display appropriate for your classroom and add new sections when new number concepts are introduced.
